

How to have a Clear, Sparkling pool with **ProTeam® Simple Solution.**

Start up right with Simple Solution.

Balance Water, perform maintenance

Before starting on the Simple Solution system, it's important to balance your pool water and perform proper maintenance on your equipment. Spring start-ups, freshly filled pools, new pools, or pools new to the Simple Solution system should follow the start-up procedures and have a water sample tested by a ProTeam Dealer. Your ProTeam Dealer will advise you on the proper steps to balance and prepare the water. When using products other than those associated with the Simple Solution System, always follow label directions for those products. Clean automatic feeder and remove all other chemicals from skimmer and feeder. **Turn automatic feeder to the lowest possible setting before you start up on the Simple Solution System. The Simple Solution System is so efficient that the feeder will only require the minimum setting.**

Add ProTeam Supreme Plus

Because Simple Solution products work together, the ProTeam Supreme Plus must be added first. Because the ProTeam Supreme Plus is not susceptible to sunlight degradation, does not evaporate, and is not altered by other chemicals, most pools will require application once a year (or less) to replace Supreme Plus lost from backwashing or draining of pool water. **It is necessary that a sufficient amount of ProTeam Supreme Plus be applied or the Simple Solution System will not function properly and substandard results will occur.**

With the pump and filter running, add 20 lbs of ProTeam Supreme Plus for every 10,000 gallons of pool water. Apply Supreme Plus by broadcasting the material over the surface area of the pool with the pump running. Do not backwash filter for 48 hours after applying product. Allow pool water to circulate for 4-8 hours after application. Within two weeks after your initial application, bring a pool water sample to your ProTeam Dealer. Your dealer will determine if an adequate quantity of ProTeam Supreme Plus has been applied.

Superchlorinate

To remove any chlorine demand from the water, add ProTeam Zipchlor or Quick Shock at a dose of 1 lb. for every 10,000 gallons of pool water. Test for free chlorine 24 hours after shocking. If your pool water does not have a minimum of 2 ppm chlorine residual, repeat the superchlorination procedure. You are now ready to start your weekly routine maintenance with the Simple Solution System.

Weekly routine maintenance with the Simple Solution System.

Test the water

Using the Test Strips, test the pool water for sanitizer (free chlorine) and pH levels just before the addition of chemicals to the pool. This will avoid false readings. Add appropriate products, if required, to adjust pH to 7.2 – 7.6. Only increase the feeder control setting if the sanitizer levels tests below 1.0 ppm. Open slightly to maintain 1.0-1.5 ppm sanitizer level. Check total alkalinity level and maintain 125 – 150 ppm.

Add ProTeam High Tech Tabs

Fill feeder once a week. If the feeder is not a floating type, turn the pump off before opening the feeder housing. Stand to the side of the feeder and carefully remove the feeder lid, allowing any pressure that may have built up to bleed off. Fill the feeder according to manufacture's operating instructions and reclose, making sure the feeder lid is securely tightened. Turn on the pump to check the system for proper sealing.

Add ProTeam Multi Magic Shock

Apply one-half bag of ProTeam Multi Magic Shock per 10,000 gallons of pool water, once a week. Turn on the pump before addition and broadcast Multi Clear Shock over the water surface at the deep end of the pool. Use a pool brush to disperse any granules which may have settled to the bottom of the pool. Swimming may be resumed in as soon as 15 minutes after applying ProTeam Multi Magic Shock, as long as free chlorine is between 1-3 ppm.

The Simple Way to a Clear, Sparkling Pool

Everything you need for beautiful pool water is in one box. ProTeam® Simple Solution is the easy way to maintain your pool.

ProTeam 3" High Tech Tabs

FEATURES

- Patented formula produces higher chlorine efficiency
- Reduces pool operating cost
- Offers enhanced swimmer comfort
- Causes less pH change
- Reduces build-up of stabilized chlorine

BENEFITS

- Maintains correct sanitizer levels while using less product
- Requires less balancing of pool water
- Water feels soft and gentle to eyes and skin
- Keeps feeders clean
- Offers less maintenance and sparkling blue pool water

ProTeam Multi Magic Shock

FEATURES

- Eliminates contaminants so that chlorine sanitizer can work more efficiently
- Minimizes the formation of chloramines while delivering the shocking (biocidal) action of Dichlor
- Kills bacteria while keeping pool crystal clear
- Provides the power of two oxidizers
- Provides broader efficiency against bacteria and contaminants

BENEFITS

- Easy to use – one product sanitizes and shocks
- Quick dissolving
- No pre mixing necessary
- Will not bleach liners
- Minimizes wait time after shocking

Test Strips

FEATURES

- Tests Free Chlorine, pH, Total Alkalinity, Cyanuric Acid levels
- Compatibility color chart on label

BENEFITS

- Easy and effective

Refreshingly Simple Pool & Spa Care

SMALL KIT:

- (1) ProTeam 3" High Tech Tabs - 5 lbs
- (5) ProTeam Multi Magic Shock - 1 lbs
- (1) Test Strips Bottle (25 count)

LARGE KIT:

- (2) ProTeam 3" High Tech Tabs - 5 lbs
- (10) ProTeam Multi Magic Shock - 1 lbs
- (1) Test Strips Bottle (25 count)
